

FIELD BALANCE

VMI Easy Viber (S/N 011102)

Benefit

This process helps you balance the propeller by increasing or decreasing weight on the propeller at the referential point. It translates the machine vibration to locate propeller's unbalanced size and position. The benefits of this process, way better than shop balancing, are as below

1. Save your maintenance time
2. Reduce your maintenance cost

Capability

We offer dynamic balance service regarding 1 PLANE and 2 PLANE Certified by ISO 10816-3. Through out the country, we're prompt to provide you our high quality service on site.

Specification of Tool

Vibration input 1 rpm/phase
Sensitivity 100 mv/g
Frequency range 0.5-15000 Hz
Temperature range -50 to +120°C
External Cable length 6 m

We engineer your success
